

AutoBar®

Heats the food while you drive!

Background

Autobar® is made for those who use a car, contracting machines or some type of vehicle as a work place. For those who work a long way from home, or far away from cities. For those who work unsocial working hours, or for those who eat special food. And for everyone else-who simply prefer home-cooked meals instead of road restaurants and street kitchens

What?

Autobar® food box heaters come in 2 different models: **MiniBar®** and **Automat®**. Both models are available as single-oven (for one food box) and double-oven (for two food boxes), as well as for 12 or 24 Volts.

The **MiniBar®** Robust is made completely of stainless steel. The connection cable has a length of 1.2 metres, with a cigarette lighter plug included. The food box is not included but is available as an accessory.

The **Automat®** Robust is dark gray fibreglass thermoplastic with an aluminium oven bottom. There is a power switch with a control lamp for each food box section. The connection has a length of 1.2 metres with a cigarette lighter plug included. Food box/boxes of aluminium are included.

How?

Just fill the practical food boxes with food, plug the food box heater into the cigarette outlet and your food will be heated while you drive. The heating time is approximately 30 minutes, depending on the type of food and the amount. The power consumption is approximately 50 Watts per food box section.
