

# Daytime runninglight system

## Universal 12 volt

### Background

National adaptation means the adaptation of vehicles to national laws and regulations – and to climate conditions and special requirements on the current market. Today we work with national adaptation in a number of different countries with the exception of our home market, Sweden. The main idea in our production development is to with each detail we deliver, have the same quality as the car's original equipment.

### Characteristics EB776

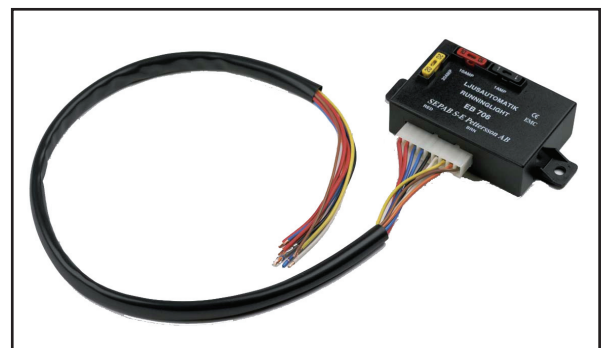

- For both positive and negative controlled system.
- Loads the vehicles electrical system as if the lightswitch is turned on.
- Separate power feeds for Parkinglight and Headlamps to avoid high temperatures in the harness and in the Daytimerunninglight box.
- Does not load the ignitionlock.
- Fuses integrated in the box for Headlight and Parkinglight..
- Harness with multiconnector.
- Can be controlled either from Ignitionlock, Alternator or oilpressure ( loads less then 1mA).
- Can handle loads up to 30 amp on Parkinglight and on headlamps.
- Transientprotected and EMC protected.
- Is developed in accordance to the demands put on Car equipment and is tested in accordance to the European CE regulations.
